

Issue # Summary

| | |
|-----------|--|
| K3D-3819 | Context Menus on Level and Level Set tabs (in Part Splitter) should match better. |
| K3D-9578 | Regression: this STEP file opens with zero entities. |
| K3D-10659 | Mass Props values for non-coordinate based results (Volume, Mass, Area) should not change if body is moved |
| K3D-11085 | Creating a circular reference causes KeyCreator to close without warning |
| K3D-11105 | Regression: KC gives an Access Violation error when trying to suppress a pocket |
| K3D-11174 | KeyCreator adds characters to notes when importing this DXF |
| K3D-11318 | KC2023 SP0 fails to cut a tapped hole through a curved surface |
| K3D-11555 | Regression: Pyramid creation dialog always uses the Lower Minor Radius value, even when that control is inactive |
| K3D-11736 | Regression - Not able to use Pocket with 2 closed profiles not on same plane |
| K3D-12020 | ISO, DIN, JIS tapped thread rep is larger than the 3/4 arc standard |
| K3D-12040 | Database Standard changes without permission |
| K3D-12077 | Changing Pipe Tap standard database after setting the Pipe Thread Series can lead to an error loop |
| K3D-12087 | Hidden edges cannot always be unhidden. |
| K3D-12090 | Solid High Precision Mass Properties change after rotating about an axis |
| K3D-12173 | Regression: Feature Control Frame>Profile of Surface>Boundary results in an erratic leader line |
| K3D-12214 | File Association is not showing the correct icons |
| K3D-12236 | Dynamic Sphere creation can fail if using KeyIn |
| K3D-12328 | Elbow Attributes will not show up when Standard is changed during Section View creation |
| K3D-12353 | REGRESSION: Hole Table's Notes are placed at different Depths. |
| K3D-12381 | Regression: Default directories still points to a Parasolid directory, but none is installed. |
| K3D-12389 | The Filter does not allow selecting both Solids and Solid Faces at the same time for Change Material |
| K3D-12407 | Detail>Section View checkbox behavior is inconsistent |
| K3D-12413 | Hole Table creates dozens of Labels for some holes in this file. |
| K3D-12421 | Moving a Composite in a referenced part causes it to temporarily disappear from the referencing part. |
| K3D-12433 | Update tall banner image in all KeyCreator and utility install programs |
| K3D-12440 | Assembly> Export> Parasolid fails to export files with too many dots (.) in the names. |
| K3D-12458 | Rotating Section Views should move the title so it's in the same relative location. |
| K3D-12484 | Add option to specify Parasolid export version |
| K3D-12495 | Changing the Material properties of a solid should not overwrite the Material properties of faces that are different from the solid. |
| K3D-12540 | In this file, breaking the solid sometimes causes an Access Violation error. |
| K3D-12549 | Editing a Section View does not remember the setting |
| K3D-12594 | Tools>Mechanical Elements>Gear causes an access violation for this Customer. |
| K3D-12665 | Exporting the attached file to IGES causes an Exception error |
| K3D-12667 | REGRESSION: Creating a Long Break Instance does not break existing Alignments with the original Instance |
| K3D-12677 | REGRESSION: Section View Cutting Line preview is not displayed in correct construction plane |
| K3D-12739 | Section View Elbow Attributes pages should not be blocked when Standard = User |
| K3D-12749 | REGRESSION: Shaded All Edges render mode causes true type fonts to vanish |
| K3D-12765 | REGRESSION: Read Assembly Tree reports that CKDs are "Unknown File Type " |
| K3D-12766 | Undo the fix for K3D-10326. Change/Set Material |
| K3D-12769 | REGRESSION: Section View is not working properly. |
| K3D-12770 | REGRESSION: Backup during Section View placement causes an Out of Memory error |
| K3D-12773 | REGRESSION: Section View throws an error on valid Cutting Plane Line locations. |
| K3D-12774 | REGRESSION: Section View mis-places the Section label |
| K3D-12797 | Pre-Select> Replace Instance Entity causes a crash in this file |
| K3D-12813 | REGRESSION: Change Material no longer works for faces |
| K3D-12821 | The File> Print lists is wrong. |
| K3D-12857 | REGRESSION Tools>Fastener>Bolt not displaying correct thread length |
| K3D-12959 | REGRESSION: The selection highlighting is wrong for File> Export> AutoCAD |
| K3D-9061 | Unable to create arc/circle tangent to center point in planes 5 or 6 if ZLock is turned on |
| K3D-9347 | Modify> Split> Sheet Body/Faces should keep the face colors from the trimming bodies |
| K3D-9353 | Modify> Split> Solid should keep the Material Properties from the trimming bodies |
| K3D-9645 | KeyCreator generated AutoCAD files always read into other programs in INCH units |
| K3D-10759 | Moving the cursor slightly does not maintain the desired Extrude Direction vector when in a View that is perpendicular to the extrude direction. |
| K3D-11453 | Composite entities change color when composite is burst |
| K3D-11807 | REGRESSION: Wireframe entities and positions can't be selected in HLR Instances |
| K3D-11901 | REGRESSION: Importing CATIAv5 with annotations produces unexpectedly different color results |
| K3D-11948 | Cylindrical face does not highlight when placing radial detail with Quick Dimension |
| K3D-12039 | Part reference detail entities do not display in layout instance |
| K3D-12257 | Radial Dims are wrong in Revisions of scaled Section Views. |
| K3D-12304 | Flare V Groove Weld Symbol is inaccurate when standard is set to JIS |
| K3D-12305 | Surface Finish: Waviness hyphen location is not accurate when standard is set to JIS |
| K3D-12544 | AutoCAD 2018 DWG files exported from an Inventor part file do not read into KeyCreator |

| | |
|-----------|--|
| K3D-12579 | Section Views do not know if the scale note should be displayed at ½ the text height of the label note or not. |
| K3D-12586 | There is a typo in the options for Tools>Structural Shapes>Rectangular Tube |
| K3D-12590 | Format Cutting Plane Line>Section View Label option does not work |
| K3D-12591 | REGRESSION: CATIA v4 Import does not ever complete |
| K3D-12796 | Layout instance of part reference does not update when changes are made in model mode |
| K3D-12858 | Modify Hole does not see the correct Countersink information |
| K3D-12950 | Opening an SAT should add Materials to the file in the same way that Importing the SAT does. |
| K3D-12988 | Materials do not import correctly if their RGB colors match any of the colors in the CKD's palette. |
| K3D-12990 | REGRESSION: File> Open no longer remembers the last filetype used. |
| K3D-13048 | REGRESSION: KCPrime Import dialog isn't remembering the file type. |
| K3D-13065 | REGRESSION: Tools>Feature>Pocket allows you to specify a depth even though it defaults to Through |
| K3D-13154 | Remove ability to export 3D PDF files from layout mode |
| K3D-13192 | Tools>Mechanical Elements>Chain is created as mechanical element object even when that setting is unchecked |
| K3D-13196 | "Turn on Lights" and "Display light markers" does not appear in layout instance until rendering mode is changed |
| K3D-13216 | REGRESSION: PMI Views do not read in |
| K3D-13231 | Modify> Split> Sheet Body does not properly maintain a face color from this trimming sheet |
| K3D-13232 | Unstitch fails to properly copy the color from multiple unhooked faces. |
| K3D-13337 | Iso Fit Tolerance is not correctly tolerancing Diametrical Dims |
| K3D-13340 | ISO Fit Tolerance do not correctly show plus and minus signs |
| K3D-13345 | REGRESSION: Section Views don't remember they are supposed to have "1/2 Text Height" enabled. |
| K3D-13346 | REGRESSION: Read Assembly Tree fails if File Type = "All Files (*.*)" |
| K3D-13367 | REGRESSION: Trim Planes do not properly display during selection. |
| K3D-13376 | REGRESSION: Box Move no longer properly moves Drill Holes |
| K3D-13399 | REGRESSION: Modify> Split> Solid causes an Internal Part Management Error |
| K3D-13406 | ISO Fit Tolerance do not correctly show plus signs or leading digits on positive tolerances |
| K3D-11013 | You can only suppress a lightweight reference by checking suppress in the part splitter |
| K3D-11103 | In the Part Splitter window, the context menu cannot make Part References lightweight. |
| K3D-11455 | REGRESSION: TrimSheetSplit.kxl no longer gives the option to press "Enter to break" |
| K3D-12154 | Always Display Border in detail callout dialog does not update when this option is unchecked in the Instance Format Dialog |
| K3D-13335 | "Restrict Chain Select" settings is ignored if Dynamic Chain selection is used. |
| K3D-13368 | ISO Fit Tolerance Values should be displayed with at least 3 digits of accuracy. |
| K3D-13435 | Arrows in STEP AP242 file do not read in correctly |
| K3D-13480 | User requests these Fit Tolerance Grades be added to the installed Tolerances |
